METAL-GUARD® RC

Made with minimum 30% recycled material.

Premium Metal-Guard RC film is a safe, effective, corrosion inhibitor (VCI) film made with minimum 30% recycled material. It is specifically engineered to provide best protection for multi-metal parts and surfaces without compromise.

Premium Metal-Guard RC VCI film meets the specific requirements for transporting automotive, heavy equipment and other metal components and machinery throughout Europe. While other recycled films typically show lesser corrosion protection, Daubert Cromwell's new film is tested and proven as best VCI for metals during storage and transit.

Strong, durable and transparent, it complies with recognized standards including TRGS615 and 900, RoHS, and REACH.

- Recyclable
- TL8135-0043; TRGS 615 and 900
- Heat-sealable, tear-resistant, transparent
- Odorless, non-toxic
- Excellent barrier against the corrosive effects of oil, water, moisture
- Protects wide range of ferrous/non-ferrous metal parts used in automotive, heavy equipment, and fabricated metals markets.

Also available in Clear Pak® RC VCI Films

CLEARPAK® RC

- Protects aluminum, copper & steel
- Non-nitrite

CLEARPAK® BIO

- Bio-based corrosion protection for ferrous metals
- All-natural volatile corrosion inhibitors derived from plants
